
Discoverability Report

How a business shows up — and doesn't — across search and AI engines in its local market.

ILLUSTRATIVE SAMPLE

Example: a **family dental clinic** in the Edmonton market

Prepared by **Spencer Morley Consulting** · SMC Discoverability Index method

Sample only. All names are anonymized placeholders and all figures are illustrative — not a real audit.

THE HEADLINE

SMC Discoverability Index

Rank **8 of 9** — near the bottom of the clinics measured

The category leader scores 72. Your clinic has the reputation to compete — it simply isn't telling that story to the systems patients now start with. The 41-point gap is what this report is built to close. (Clinic names shown are fictional, for illustration; your real report names your actual competitors.)

Westhollow Dental — AI-search ...		72
Kingsmere Dental — classic-se...		64
Royden Oaks Dental		58
Glenbrae Dental		53
Harborwalk Dental		49
Lazybrook Dental		44
Stillmeadow Dental		38
Your clinic		31
Sugarmill Dental		27

01

Executive summary

Your clinic scores **31 out of 100** on the SMC Discoverability Index — eighth of the nine clinics measured in this sample. Across 16 AI-engine answers to the questions local patients actually ask, your clinic appears **zero times**. Not once, on any engine.

This is not a reflection of the practice or its care. It is a structural gap: the signals search engines and AI tools use to find and recommend a local clinic are

largely missing from the website and the clinic's online presence. The reputation is real; the systems patients now start with just can't see it.

\$28,800–\$57,600

Estimated annual revenue going to competitors through AI and search discovery — modelled at two to four recovered new patients per month at a \$1,200 first-year value. Closing the gap is a four-figure engagement that pays for itself quickly. **MODELED** — assumptions stated

02

What we looked at

We measure four layers of discoverability and combine them into one score, built the same way for every business — so a clinic sees its number against every competitor on a single leaderboard, and can track it over time.

Method note: this is an illustrative sample. In a real report, every on-page finding is verified by live browser render, every figure is sourced or labelled, and Canadian platforms (Google Business Profile, HomeStars, Consumer Choice) are weighted while US-only platforms are down-weighted.

03

What we found

● Invisible across AI answers

Across 16 answers — covering ChatGPT, Gemini, and Perplexity for the questions local patients type — your clinic is never named. Competitors appear in two to five each. In the AI-mediated version of this market, the clinic does not exist.

Why it matters: more patients begin here every month.

● The website sends almost no relevance signal

The most important pages are missing the basic elements search engines rely on to understand and rank a clinic. The site reads as "generic dental page" rather than "the dentist patients in this neighbourhood are searching for."

Fix horizon: quick wins, measurable within 30 days.

● Not machine-readable to AI agents

The clinic's core facts — what it offers, where it is, when it's open — live only in page text, not in a form AI tools and assistants can reliably read and cite. This is the layer competitors are starting to win on.

Fix horizon: foundational, high impact.

● A strong reputation that isn't reaching the systems

The clinic's reviews are positive but thin in volume and recency on the Canadian platforms AI engines treat as trust signals — so an existing strength isn't translating into discoverability.

Fix horizon: ongoing, compounding.

● Genuine longevity and patient loyalty

The clinic has the kind of track record these systems reward — it's simply buried where engines and new patients can't see it. Surfacing it is one of the fastest, highest-impact moves available.

An asset to build on.

04

The competitive field

Two clinics are winning two different games — and your clinic is in neither.

Westhollow Dental leads AI search: not because it's the biggest, but because it made its credentials easy for these tools to read. **Kingsmere Dental** wins classic search on the strength of review volume and content depth.

The legacy peers tell the most useful story: clinics no larger or older than yours clear the mid-40s on the index through review base and Canadian recognition alone. Your clinic's own longevity story isn't reaching the systems that would surface it.

05

The SMC Discoverability Index

One 0–100 score: classic SEO (30), AI visibility (35, weighted highest because that's where the durable edge is forming), machine-readability (20), and Canadian trust signals (15).

#	Clinic	SEO/30	AI/35	Machine/20	Trust/15	SDI/100
1	Westhollow Dental	22	26	12	12	72
2	Kingsmere Dental	25	22	6	11	64
3	Royden Oaks Dental	21	20	8	9	58
4	Glenbrae Dental	20	18	7	8	53
5	Harborwalk Dental	19	15	7	8	49
6	Lazybrook Dental	18	13	6	7	44

#	Clinic	SEO/30	AI/35	Machine/20	Trust/15	SDI/100
7	Stillmeadow Dental	16	11	4	7	38
8	Your clinic	12	4	3	12	31
9	Sugarmill Dental	14	5	4	4	27

Note your strongest pillar is trust (12/15) — the reputation is there. The score is dragged down by AI visibility (4/35) and machine-readability (3/20): the clinic is liked, but unfindable.

06

What the gap costs

Modelled on recovered new patients, not invented traffic math, so the number survives scrutiny. Edmonton new-patient first-year value is modelled at a conservative \$1,200.

Scenario	Recovered patients / mo	Annual recovered revenue
Conservative	2	\$28,800
Base	4	\$57,600

These are topline figures, modelled — assumptions stated. Replace the modelled \$1,200 with the clinic's real new-patient value and this becomes a hard number.

07

Where your clinic already wins

Two assets are real and currently underused — which is good news, because they're the foundation the rest builds on. **Genuine longevity and patient loyalty**, the kind of track record AI engines reward once it's made visible. And a **solid**

review rating — the quality signal is there; only the volume and reach are thin. A focused push converts an existing strength into a discoverability asset.

08

Prioritized roadmap

Ordered by impact-to-effort. The first moves are quick wins — achievable in weeks, none requiring a website rebuild. Here are the first two:

#	What it achieves	Effort	Impact
1	Make the clinic's core pages clearly say what they are, so search engines stop guessing and start ranking them	Quick win	High
2	Turn the existing 5-star reputation into review volume on the Canadian platforms AI engines trust	Quick win	High

The full roadmap is in your report

The complete prioritized plan — the specific technical fixes, exactly how each is implemented, and the order to do them in — comes with your own Discoverability Index. This sample shows the shape of the plan, not the playbook.

09

The 90-day picture

The quick wins alone realistically lift a clinic from 31 into the high-40s within a single search cycle — clearing several competitors and closing on the leaders. The full roadmap, run in order, is what moves a clinic from invisible to named in the answers patients now start with.

THIS IS AN ILLUSTRATIVE SAMPLE

Your report scores your business, your competitors, your market

Same method, your real numbers — where you rank, what the gap costs you, and the plan to close it. Start with a free quick check.
